

Dear Partner,

In order to achieve our strategic goals for growth and development, additional resources are needed at management level. This, together with a planned generational change, has meant that we have hired Tommy Bonnerup, who will take over as CEO per February 1, 2021.

Tommy Bonnerup has been CEO of several companies and has extensive experience in management. He has worked extensively with sales and marketing and comes with experience from an injection molding company.

Our current CEO Morten Primdal, who will soon turn 65, has for many years developed the company from being a craft-oriented company to today appearing as a professional injection molding company with high standards. We are pleased that Morten Primdal has agreed to continue in Dania Plast A/S as CFO and continue to be part of the Executive Board.

We are thus confident that the new management structure together with our many skilled employees will continue to be able to strengthen the collaboration with both customers and other partners.

On behalf of the company

Leif Dambo Jensen
Chairman of the Board
